Learn to walk with the hedgehog, the squirrel, the bee and their friends: the "Move it! Building Blocks Baby Walker"

Our **new baby walker** in a **modern and reduced design** from the "Move it!" product group supports toddlers with their first attempts at walking while simultaneously promoting their motor skills in a playful way. When babies have learned to turn around, to sit and to crawl, there's nothing greater than discovering the world around them with their own two feet!

With the Move it! Building Blocks Baby Walker, young children always have their favourite building blocks at hand and can let their imaginations run free while stacking up towers and castles. The building blocks which come in various colours and shapes also simultaneously train understanding of colours and shapes.

The baby walker is easy to assemble, impresses customers with its **modern design with a large proportion of wood material** used and offers quiet and safe rolling on all kinds of surfaces thanks to the rubber-finished wheels. The numerous elaborate details are particularly appealing to children. Thanks to its design with modern colours and patterns, this baby walker is an **absolute trend product with a high recognition value**, making it the perfect addition to our "Move it!" product group which already **successfully** offers motor activity classics in trendy designs such as motor activity cubes, baby walkers, shape-fitting and stacking toys **on the market**.

Come and see for yourself - visit us at our **Legler exhibition stand, stand number 048** in Hall 10.1, Aisle C.

Best regards,
Legler OHG small foot company

Birte Schierenstedt
